

16 . Median of an Array

```
class Solution {
```

```
public:
```

```
    double findMedian(vector<int>& arr) {
```

```
        sort(arr.begin(), arr.end());
```

```
        int n = arr.size();
```

```
        if (n % 2 == 1)
```

```
            return arr[n / 2];
```

```
        else
```

```
            return (arr[n / 2 - 1] + arr[n / 2]) / 2.0;
```

```
    }
```

```
};
```

The screenshot displays a coding platform interface with a dark theme. At the top, there is a search bar and navigation tabs for Courses, Tutorials, Practice, and Jobs. The main area is divided into two panels. The left panel, titled 'Output Window', shows 'Compilation Results' and a message 'Problem Solved Successfully' with a green checkmark. It also displays performance metrics: 'Test Cases Passed: 1115 / 1115', 'Attempts: Correct / Total: 1 / 2', 'Accuracy: 50%', 'Points Scored: 1 / 1', and 'Time Taken: 0.24'. Below this, there are buttons for 'Solve Next' with options like 'Multiply Array', 'Mean of an Array', and 'Greatest of three numbers'. The right panel shows the C++ code for the 'Median of an Array' problem, which matches the code provided in the previous blocks. The code is numbered from 1 to 12.

```
1 class Solution {
2 public:
3     double findMedian(vector<int>& arr) {
4         sort(arr.begin(), arr.end());
5         int n = arr.size();
6         if (n % 2 == 1)
7             return arr[n / 2];
8         else
9             return (arr[n / 2 - 1] + arr[n / 2]) / 2.0;
10    }
11 };
12
```
