

8. Array find Largest sum contiguous Subarray [V. IMP]

```
class Solution {
public:
    long long maxSubarraySum(vector<int> &arr) {
        long long currentSum = arr[0];
        long long maxSum = arr[0];

        for(int i = 1; i < arr.size(); i++) {
            // Extend the current subarray or start new
            currentSum = max((long long)arr[i], currentSum + arr[i]);
            maxSum = max(maxSum, currentSum);
        }

        return maxSum;
    }
};
```

The screenshot displays a coding platform interface with a dark theme. On the left, the 'Output Window' shows 'Compilation Results' for 'Y.O.G.I. (AI Bot)'. It indicates 'Problem Solved Successfully' with a green checkmark and a 'Suggest Feedback' link. Below this, a table shows performance metrics: 'Test Cases Passed' as 1120 / 1120, 'Attempts: Correct / Total' as 1 / 1, 'Accuracy: 100%', 'Points Scored' as 4 / 4, and 'Time Taken' as 0.33. At the bottom, it shows 'Your Total Score: 28' with an upward arrow and a 'Solve Next' section with buttons for 'Count of Subarrays', 'Longest Arithmetic Subsequence', and 'Smallest sum contiguous subarray'. The right side of the interface shows the C++ code editor with the solution code for the 'Largest sum contiguous Subarray' problem, which matches the code provided in the previous block. The code is numbered 1 through 16. A 'Start Timer' button is visible at the top right of the editor.

Metric	Value
Test Cases Passed	1120 / 1120
Attempts: Correct / Total	1 / 1
Accuracy	100%
Points Scored	4 / 4
Time Taken	0.33
Your Total Score	28
